

Proposed Solution - HouseRent MERN

Date: 18 June 2026

Project Name: House Rent

Maximum Marks: 2 Marks

HOUSERENT - PROPOSED SOLUTION

PROBLEM STATEMENT:

Renters cannot find unified verified marketplace for property search and booking.

Owners lack easy-to-use platform for listings and inquiries.

Admins have no way to verify owner legitimacy.

SOLUTION DESCRIPTION:

HouseRent is a full-stack web application (MERN) providing:

Renter Features:

- Browse and search rental properties
- Advanced filters (location, rent, type, amenities)
- View property details with owner info
- Submit booking requests with dates
- Track booking status in real-time
- Manage bookings in personalized dashboard

Owner Features:

- List properties with detailed descriptions
- Edit and delete property listings
- View and respond to booking requests
- Approve or reject bookings
- Manage property availability
- Dashboard with booking analytics

Admin Features:

- Review and approve owner accounts
- Monitor users and properties
- View platform statistics
- Ensure platform compliance

NOVELTY:

- Integrated role-based system (renter, owner, admin)
- Owner verification workflow for trust
- Real-time booking status tracking
- Comprehensive search filters
- Dashboard analytics for all roles

BUSINESS MODEL:

- Listing fees from owners
- Commission on successful bookings
- Premium services (featured listings)
- Advertising opportunities

SCALABILITY:

- MongoDB scales horizontally
- Multi-city/region expansion ready
- Mobile app extension possible
- Payment integration ready
- AI recommendations future phase
